Industrial robots are automated, programmable and capable of movement on three or more axis. Robotics simulator - Wikipedia A robotics simulator is used to create application for a physical robot without depending on the actual machine, thus saving cost and time. In some case, these applications can be transferred onto the physical robot (or rebuilt) without modifications. Application of robotics in garment manufacturing ... Increasing labor costs have been the most important driver of sewing automation within the last 30 years. Very specific and in terms of sewing operation inflexible systems made automation in the sewing industry possible.
